Relationship violence, child abuse and divorce have increased in the wake of overseas disasters. In the US, a 2009 study¹ showed a four-fold increase in intimate partner violence following Hurricane Katrina. The increase was driven by first-time occurrences of violence amongst displaced people.

NEW ZEALAND POLICE REPORTED A 53% INCREASE in call-outs to domestic violence incidents over the weekend of the Canterbury earthquake on 4th September 2010.

In Australia, there is no published research on relationship violence and disaster, yet Australians have a 1 in 6 estimated lifetime exposure to natural disaster.

It is hard to acknowledge relationship violence when a man may have acted heroically or is traumatised and is now struggling, perhaps with unemployment or suicidal thoughts.

'OTHER PEOPLE'S NEEDS ARE GREATER THAN MINE'

Relationship violence is a taboo subject. It's always been hard for women to report, but this is taken to a new level after a disaster. We have heard that women are sacrificing their own needs 'for the greater good'. 'Other people's needs are greater than mine.' And of course, after a disaster, support services are stretched.

In this context, relationship violence, may be unrecognised and unrecorded during and in the aftermath of disaster.

Yet, some women have experienced violent behaviour from their partners post disasters, and recovery workers need to be alert to the possibility of abuse, isolation and exclusion of women.

Abuse may be psychological, financial, physical or sexual, and may include property damage and stalking. Where researchers have noted

the link between disaster and increased violence against women, they attribute possible causes to heightened stress through homelessness, depression, PTSD, financial problems and alcohol abuse.

A leading US disaster researcher, Elaine Enarson, wrote that from Peru to Alaska, men cope through alcohol abuse and aggression.² Another, Duke Austin, wrote of a kind of 'hypermasculinity' that emerges from the stress and loss that can lead to increased levels of violence.³

COMMUNITY ATTITUDES CONTINUE to excuse this violence. A 2006 VicHealth survey found that a large proportion of Australians believed 'relationship violence can be excused if it results from temporary anger or results in genuine regret'.⁴ Such violence may even be seen as legitimate, and excused because this is 'the way men behave'. After a disaster, all kinds of behaviour is excused as existing social structures and norms are put on hold while a community recovers.

Alongside this, demands on women - caring for children and the elderly, looking out for community members, volunteering and increased workloads - can be excessive and increase the stress on individuals, families and communities. Lack of services and difficulty in accessing services because of childcare and transport restraints can further endanger and isolate women.

Single women, lesbians, widows, single mothers and divorced women can be overlooked in the recovery process and become further isolated from mainstream services and support, including financial aid.

AS WORKERS IN COMMUNITIES PLANNING FOR DISASTERS OR IN DISASTER RECOVERY, WHAT CAN WE DO?

This information is drawn from a literature review by **Women's Health Goulburn North East** for a study of women's experience of violence after disasters. For the full document and references, see:

Ask women if they feel safe.

Support them to access appropriate services.

Be aware that women are at increased risk of violence and male control over resources.

Ensure caseworkers are aware of this and services are available.

Engage women in the recovery and disaster planning process – not every woman needs to make sandwiches.

Think leadership, non-traditional skills programs and decision-making. Resist stereotypes.

Compensate women for their participation in planning and recovery and provide support for their participation, such as childcare and transport.

Do not overburden them.

Tap women's knowledge about their community.

Identify sex-specific needs. Use existing women's networks.

Collect data and get the facts on women, men and children.

Track where relief funds go - or don't go.
